## PROJECT DETAILS:

### Project #1

**Title** : **Openjamm**

**Environment**: **Python 3.6, Django 2.0, MySql, REST API, UI Development**

**Description:**

Openjamm is a platform enabling local musicians to find commercial gigs around. From hosting a gig to finding recurring commercial projects, Openjamm enables musicians to be able to manage their own stream of revenue. Connect with fellow musicians around you or buy tickets to their shows.

 -Host your own gig
   -Setup your own box office
   -Find creative projects
   -Setup private practise sessions with ease.
   -Connect with local artists

## PERSONAL PROJECT:

**Title**            :            **Company Job Portals**

**Environment**:  **Python, Django, React, Rest Api , React Material-Ui**

**Description:**

In my web-based application project, I developed a Company and User module that encompassed various functionalities related to candidate registration, job application, and document management. The project was built using React with Material-UI for the frontend and utilized APIs for data retrieval. Additionally, I implemented caching on the server-side to enhance performance and optimize data retrieval.

- Candidate Registration with OTP Validation:

- Job Application Process

- Dynamic Data Retrieval through APIs

- PDF Generation with Signature:

- API Integration and Server-Side Caching:
